The daily dose for an adult horse is 3–4 g.
After three weeks of use, take a 1-week break.
None have been recorded.

RECOMMENDATIONS

Use within three months of opening.

WARNING

This product is not a substitute for veterinary care and medications recommended by a veterinarian.

Do not exceed the recommended daily dose! Not suitable for pregnant females. Keep out of the reach of children!

ADVERSE REACTIONS AND INTERACTIONS

None have been recorded.

STORAGE

The product must be stored in a dry place, out of direct sunlight, at a temperature of 10–25°C, and protected from frost. The best before date is marked on the packaging.

WEIGHT

100 g

Therapist recommendation

Pulmivet is very helpful in treating chronic respiratory problems in horses. Chronic dyspnoea is currently afflicting more and more horses, not only those stabled in stalls, but also grazing horses.

It's slowly becoming the number one health problem for our horse friends. Pulmivet, due to its components, is a very effective alternative for the treatment of acute and chronic dyspnoea in horses.

At the same time, it is also acts very well on chronic skin problems.
